Homework 1-12-17

Next week I will cover shell commands in more detail. To get you started on these skills please work through [this exercise](#) at software carpentry on navigating files and the unix shell.

There are several short exercises to do at the end of the lessons under the sections with the pencil icons:

✏ **Absolute vs Relative Paths** ⊡

✏ **Relative Path Resolution** ⊡

✏ `ls` **Reading Comprehension** ⊡

✏ **Exploring More** `ls` **Arguments** ⊡

✏ **Listing Recursively and By Time** ⊡

Write your answers to these exercises in a new text document called `hw-1-12-2017` and commit the document to your github homework repo. **Practice the commit workflow with your homework answers by committing the document after each exercise**

Homework commits must be completed by Monday at 5:00 PM.

Have a great weekend!

Professor Alfaro
